Parents’ Smoking and Depression Linked to Increased ADHD Risk in Children

Release Date: Wednesday, August 8, 2018 12:01 am EDT

A new study has identified adults' smoking and depression as family environmental factors associated with the development of attention-deficit hyperactivity disorder (ADHD) in children.

The findings, which are published in Asia Pacific Psychiatry, come from an analysis of information on 23,561 children in Korea.

From a public healthcare perspective, the results illuminate the need to increase awareness of parental factors that have the potential to contribute to ADHD in children. This could be incorporated into ‘stop smoking’ campaigns or depression self-recognition programs.

“Our finding added to the evidence supporting the need for ADHD prevention strategies and would be helpful in the development of effective public prevention policies intended to promote healthy family environments,” said corresponding author Dr. Jin-won Kwon, of Kyungpook National University, in South Korea.

About Journal:

Asia-Pacific Psychiatry is an international psychiatric journal focused on the Asia and Pacific Rim region, and is the official journal of the Pacific Rim College of Psychiatrists. Asia-Pacific Psychiatry enables psychiatric and other mental health professionals in the region to share their research, education programs and clinical experience with a larger international readership. The journal offers a venue for high quality research for and from the region in the face of minimal international publication availability for authors concerned with the region. This includes findings highlighting the diversity in psychiatric behaviour, treatment and outcome related to social, ethnic, cultural and economic differences of the region. The journal publishes peer-reviewed articles and reviews, as well as clinically and educationally focused papers on regional best practices. Images, videos, a young psychiatrist's corner, meeting reports, a journal club and contextual commentaries differentiate this journal from existing main stream psychiatry journals that are focused on other regions, or nationally focused within countries of Asia and the Pacific Rim.

The Editors and the Publisher are particularly focused on helping authors develop ideas and improving the language of accepted submissions.

Asia-Pacific Psychiatry accepts articles for Open Access publication. Click here for further information.

About Wiley

Wiley, a global research and learning company, helps people and organizations develop the skills and knowledge they need to succeed. Our online scientific, technical, medical, and scholarly journals, combined with our digital learning, assessment and certification solutions help universities, learned societies, businesses, governments and individuals increase the academic and
professional impact of their work. For more than 210 years, we have delivered consistent performance to our stakeholders. The company's website can be accessed at www.wiley.com.
